Dear Hiring Manager,

I am excited about the opportunity to join the team as an Application Developer. My background in creating projects using **JavaScript, TypeScript, React, Angular, C#, SQL**, and **.NET** positions me well to contribute to the role's objectives of developing scalable systems.

Recently, I've been dedicating my efforts to **FitFuelPlanner**. It's a comprehensive **health and fitness platform**, including **web, iOS, and Android** apps, along with an **API**, designed to offer workout and meal plans. I developed the mobile application using **Expo React Native**, the web client with **React/Next.js**, and **API** using **C#** and **.NET**. This venture has immersed me in a **dynamic startup environment**, fostering a **growth mindset** and an understanding of **full-stack development**. I actively engage in online courses to further enhance my front-end and back-end development skills.

Previously I worked as an **Associate Software Engineer** at **Toshiba America Business Solutions**. There I worked on Toshiba's web-based products, Device Management and App Showcase. My experience working at Toshiba provided me experience **collaborating** with Product Managers, Senior Software Engineers, and Quality Assurance Engineers following the Agile Scrum methodology. The tech stack at that position was **Angular** and the backend was in **.NET** and **C#**.

I would be excited to interview for the Application Developer position so that I can further show my skill set that I can bring to the team, I can be best reached through my email, **stevengarciadev@gmail.com**.

Sincerely,
Steven Garcia
